## **Declaration**

I certify that the substance of this thesis has not already been submitted for any degree and is not currently being submitted for any other degree or qualification.

I certify that, to the best of my knowledge, any help received in preparing this thesis and all sources used have been acknowledged in this thesis.

A solid black rectangular box used to redact the author's signature.

Nuttamon Teerakul

## Abstract

Poverty alleviation remains a challenge for Thailand's socio-economic development. A key strategy of the Thai government to help meet this challenge at the 'grass roots' level has been the promotion of community-based enterprises (CBEs). Approximately 40 per cent of CBEs engage in food processing and handicraft production. The Government has supported CBEs through the One Tambon One Product (OTOP) project, which includes such initiatives as the OTOP Product Champion (OPC) certification that aims to improve the quality of CBE products.

National statistics and descriptive studies show that CBEs have led to both income improvement and employment creation. However, the question is whether they have alleviated poverty. Poverty can be viewed from a number of perspectives, not only monetary. Therefore, a multidimensional perspective of poverty is a central theme of this thesis. The purpose of this research has been to conduct a comprehensive analysis of the role that CBEs play in poverty reduction at the *household* level in the context of the United Nations Millennium Development Goals (UN MDGs). To obtain data for the research, a detailed survey was conducted of 14 CBEs in northern Thailand. The survey included 343 households from 12 villages.

The analytical framework used in the research is based on a multidisciplinary approach with two key steps: (1) identification of poverty groups within the target geographical area and their related poverty components; (2) and investigation of the role of CBEs and other factors on household poverty. The framework combines three well-known but traditionally separately used methodologies in order to better explore the economic dynamic of CBEs on households. The framework is relevant, both theoretically and methodologically, to researchers undertaking similar poverty, microenterprise and social entrepreneurship studies in developing countries.

The principal component analysis (PCA) method is used to formulate a poverty index and to discriminate poverty groups. By applying PCA, the study established significant poverty indicators that were then used to identify the most vulnerable households within the survey area. The propensity score matching (PSM) method was used to assess impacts of CBEs on household poverty and also used to address the selectivity bias arising from

the quasi-experimental design with constructed controls method. The analysis was extended to examine impacts of the CBE characteristics and performance on household poverty by applying a regression-based method with statistical controls. This study also examined the determinants of household poverty by using the weighted least square regression (WLS) method.

Using the results of PCA from eight dimensions of poverty indicators, the relative poverty of households can be divided into three groups of approximately the same size. The lowest-ranked group (the poorest) comprised 32 per cent of the households; the middle-ranked group 32.7 per cent; and the higher-ranked group accounted for 35.3 per cent.

The research postulated that there would be a relationship between the wellbeing of CBE members based on their level and type of involvement. Therefore members of CBEs were classified as either 'active' or 'inactive'. It was shown, by using PSM, that there was a significant difference between the income that active and inactive CBE members earned. This is primarily attributed to the fact that active members are able to derive additional income from wages for their CBE labour, whereas inactive members are only able to derive benefit from dividends, which are highly variable between CBEs. Contrary to expectations, further examination of household income indicates that there is no significant difference between CBE members and non-CBE members. The main contribution to wellbeing appears to be related to social-capital building and gender empowerment. This outcome stresses the importance of using other than monetary measures to address and understand poverty.

A clear outcome of this study is that CBEs play an important role in capacity building through social-capital development. As such CBEs constitute a genuine economic stimulus mechanism at the grass roots level. However, in terms of monetary aspects, there is a need to further examine the reasons why some CBEs do not contribute to income improvement. In part this may be to do with the lack of business-plan development, the lack of market knowledge coupled with remoteness from main centres of economic production, the lack of partnerships, such as production technology and financial alliances, and the lack of achievement of an OPC certification. An additional consideration is the influence of ethnicity on attitudes to economic development.

Governments and CBEs could be encouraged to address sufficiency of partnerships with CBEs, in particular regarding provision of financial and technical expertise. In relation to the OPC certification, the government could facilitate ways of ensuring that a greater proportion of CBEs achieve higher OPC certification. Governance issues may warrant further inquiry, perhaps the social audit literature may be of help in this regard.

## **Acknowledgement**

I would like to acknowledge all those who have directly or indirectly contributed to the conduct of my research and the finalisation of my thesis.

In particular I am deeply indebted to my three supervisors: Dr Renato Andrin Villano, Dr Fiona Wood and Dr Stuart Mounter. Throughout the duration of my candidature, they have provided unstinting support and patient guidance and readily shared their ideas, time and other resources. I am particularly appreciative of the substantial amount of time they had to commit to the numerous chapter revisions. Their support has also been invaluable to me as an international student. Their wisdom, knowledge and commitment to the highest standards inspired and motivated me. They have taught me how to write a thesis and academic papers. The supervision process has forced me to improve my abilities to become a better researcher. Without their kind encouragement, understanding and suggestions, I could not have finalised this dissertation.

Chiang Mai University (CMU) granted me leave from my lecturer position within the Faculty of Economics to pursue my doctoral studies at UNE. I am particularly appreciative of this commitment to my professional development. I am also very grateful for the financial support provided by the Faculty of Economics at CMU through the awarding of a scholarship for my PhD studies.

My sincere thanks also go to the staff in the Faculty of Economics, Office of the University at CMU and the staff and other postgraduate students of the School of Business, Economics and Public Policy at UNE who supported and assisted my doctoral studies over the past three and a half years. Thanks also to the staff in UNE's International Office, Research Services, Information Technology Services, and Dixson Library.

I would like to extend my gratitude to Professor Aree Wiboonpongse, Associate Professor Songsak Sriboonchitta, and Professor Euan Fleming for their helpful suggestions, constructive comments and kind encouragement. I would also like to thank the staff in the Tambol Organisation Administration (TOA) offices who provided vital information for this study. In addition, I thank the interview moderator, all heads, committees and

members of the community-based enterprises, and all the village heads whose willingness to participate in my research enabled this study to succeed.

I have great pleasure in thanking Dr Miriam Verbeek for her kind support to improve the legibility of my thesis through the extensive provision of her editing skills. I am also thankful to Prathanthip Kramol and Pimpimol Kaewmanee who kindly supported me without hesitation during my international student life – especially their counsel, encouragement and moral support.

My sincere thanks also to my friends in Chiang Mai and Armidale: Nong, Noo, Pui, Jome, Keng, Tong, Yui, Ma, the Villano family, Sayaka, Da, Kes, Bee, Jonathan, the Armidale Thai community and all my other friends for their support, helping me without reluctance, treating me as family and keeping me sane during my period of candidature.

Last, but not least, my deepest gratitude goes to my mother, father, and sisters. I thank them for their love, support, encouragement and understanding during my studies at UNE. Special thanks go to my Mum for giving me life in the first place, for her infinite and invaluable love, for supporting my education without any conditions and for her keen encouragement to pursue my educational success.

This thesis is dedicated to all my family, especially to the memory of my grandmother, who always encouraged me to pay attention to education.
