## Acknowledgements

This thesis is dedicated to the people of Kulai Aboriginal Preschool, who continue to welcome me into their workplace and to share their knowledges. Particularly to Julie Carey, a good friend and colleague, who enabled my journey with Kulai's quality assurance process. Dialogue with the team throughout and beyond this research significantly influenced my understanding of the concept of meaning making.

I am grateful to Elaine Wilson, Gwynnyth Llewellyn and Jo-Anne Reid who inspired me to continue learning and to think in multiple ways. I thank also my supervisors for assisting my work. Bob Boughton and Ralph Catts took on bridging roles, when my primary supervisor was absent. Early in the study Nadine McCrea assisted by sharing her knowledge and documents, plus conducting an in-service workshop at Kulai. Kerith Power shared her office, texts and the challenges of doctoral study for half of this project's life. Recently she has enthusiastically supported and critiqued the study. My particular thanks are due to Margaret Somerville. Her warmth, care and rigorous approach throughout this research facilitated my penetration of the theory and critique of practice to unexpected levels and in unique directions.

My family have always been on life's journey with me and have contributed much to my understandings. Alex Edwards and Brian McRae have spear-headed this love, support and encouragement. Ellen and Geoff Green, Ailsa Melville, Jan Carruthers, Sue Johns, Gwen Guyatt, Kim Glover, Helen Evans, June Jeremy, Rebecca Spence, Peter Shanahan, Robyn Smyth and Cathryn McConaghy have enthusiastically given of their time to my benefit.

Our annual doctoral schools highlighted the academic program. Email links beyond the schools with Chrissiejoy Marshall, Annie Lloyd, Sally Dew and Phil Rutherford were valued encounters. Fellow internal students: Fran McKay, Laura Hartley, Phoenix de Carteret, Myfanwy Maple, Maria Zimba, Keith Woodley, Adele Anderson and Alison McConnell-Imbriotis added joy and many considered insights to my studies. Thanks also to colleagues in the UNE and TAFE early childhood programs and Larry Smith from the School of Professional Development and Leadership who supported my continued learning.

I am indebted to Dianne Roberts, Kerith Power and Margaret Somerville for their tireless efforts in organising the Partnership Conference. This conference and the CITEP conference, both held at UNE, provided significant stimulus to my early thinking.

I also appreciate the assistance of the de Lissa Institute of Early Childhood and Family Studies at the University of South Australia. It was a great honour to receive the Jean Denton Memorial Scholarship (2003), which enabled me to finalise this research project.

## Abstract

This research explores the implementation of an external quality assurance process with the people of Kulai Aboriginal Preschool. A participatory action research approach was used to examine the process. The impact of this quality assurance process on learning and change in the workplace was the focus of the study.

Putting Children First: Quality Improvement and Accreditation System (NCAC 1993) was the initial impetus for organisational change at the preschool, however establishing trust and engaged relationships emerged as critical to meaning making and to changing workplace practices. Metaphors aided communication by bridging cultural boundaries and enacting transformations in thinking. Metaphor and quality assurance were seen as fluid terms, generating energy by moving between possible understandings. Meaning making comes about as a consequence of this movement.

Data was collected through participant observations and interviews. This information was recorded using written and visual narrative forms. Maps enabled a macro and micro-analysis of participation in meaning making and organisational change in the context of this Aboriginal early childhood centre. This analysis brought alive the space-in-between, also known as the third space or m-i-n-d field where meaning making was found to occur. Maps enabled the visualisation of meaning making to occur as a consequence of shared action. Analysis of these maps illuminated the complexity of participation in the quality assurance process.
