10 APPENDICES

Appendix 1.1

Please pull out sheet for reference throughout the thesis.

Appendix 1.1. Acronyms for the components of the fire regime (introduced in Chapter 1) and the combinations of fire categories (introduced in Chapter 4).

Fire frequency components	
NOF	Number of fires
SIFI	Shortest inter-fire interval
TSLF	Time since last fire
Fire categories	
LLL	Low NOF, long SIFI, long TSLF
MLL	Moderate NOF, long SIFI, long TSLF
MLS	Moderate NOF, long SIFI, short TSLF
MSL	Moderate NOF, short SIFI, long TSLF
MSS	Moderate NOF, short SIFI, short TSLF
HSS	High NOF, short SIFI, short TSLF

Appendix 2.1

Appendix 2.1. Family and species name changes from the original source of Harden (1990; 1991; 1992; 1993).

Previous name in Flora of NSW	Current name	Reference
<i>Austrostipa</i> sp.	<i>Austrostipa</i> sp.	Jacobs and Everett (1996)
<i>Banksia integrifolia</i> subsp. A	<i>Banksia integrifolia</i> subsp. <i>monticola</i>	Theile and Ladiges (1994)
<i>Bursaria spinosa</i> subsp. <i>spinosa</i>	<i>Bursaria spinosa</i> var. <i>obovata</i>	Cayzer et al. (1999)
<i>Danthonia</i> sp.	<i>Austrodanthonia</i> sp.	Linder (1997)
<i>Eucalyptus gummifera</i>	<i>Corymbia gummifera</i>	Hill and Johnson (1995)
<i>Gnaphalium coarctatum</i>	<i>Gamochaeta spicata</i>	Reinstatement of old name
<i>Gnaphalium involucratum</i>	<i>Euchiton involucratus</i>	Reinstatement of old name
<i>Gnaphalium</i> sp.	<i>Euchiton</i> sp.	Reinstatement of old name
<i>Gnaphalium sphaericus</i>	<i>Euchiton sphaericus</i>	Reinstatement of old name
<i>Oxylobium ilicifolium</i>	<i>Podolobium ilicifolium</i>	Crisp and Weston (1995)
<i>Phyllanthus gasstroemii</i>	<i>Phyllanthus gunnii</i>	Hunter and Bruhl (1997)
<i>Rubus moluccanus</i>	<i>Rubus moluccanus</i> var. <i>trilobus</i>	
Previous family name in Flora of NSW	Current family name	Reference
Luzuriagaceae	Geitonoplesiaceae	Coran (1994)

Appendix 3.1

Appendix 3.1. Satellite Image dates and number of fire mapped from hardcopy records used for each fire season for the compilation of the fire history. Satellite data sources are: TM = Landsat Thematic Mapper and MSS = Landsat Multispectral Scanner. * = years where no data were available.

Fire Season	Satellite mage date and source	Number of fire boundaries mapped from hardcopy records
1972-73	December 1972 (MSS)	
1973-74*		
1974-75		1
1975-76	October 1975 (MSS)	1
1976-77		2
1977-78		2
1978-79		1
1979-80	November 1979 (MSS) April 1980 (MSS)	3
1980-81	February 1981 (MSS) April 1981 (MSS)	1
1981-82	April 1982 (MSS)	
1982-83	October 1982 (MSS) December 1982 (MSS) April 1983 (MSS)	
1983-84	1984 (MSS) (no month recorded in UNE catalogue)	
1984-85	December 1984 (MSS) April 1985 (MSS)	7
1985-86	February 1986 (MSS)	2
1986-87		3
1987-88	February 1988 (TM)	2
1988-89	August 1988 (MSS) March 1989 (MSS)	2
1989-90		4
1990-91	August 1990 (MSS) March 1991 (MSS)	5
1991-92*		
1992-93	November 1992 (TM) January 1993 (MSS)	2
1993-94	April 1994 (MSS)	3
1994-95	July 1994 (TM) (pilot data) September 1994 (TM) December 1994 (TM) (pilot data) May 1995 (TM) (pilot data)	ARMS mapped
1995-96		ARMS mapped
1996-97		ARMS mapped
1997-98	January 1998	ARMS mapped

Appendix 4.1

Appendix 4.1. Mean cover (and standard error) for ground cover species surveyed in the Tablelands. Sorted in order of descending abundance in the HSS category within each growth form.

	Fire category	HSS		MSS		MLS		LLL	
Growth form	Species	Mean	sem	Mean	sem	Mean	sem	Mean	sem

<i>Alyxia ruscifolia</i>	10	5	4	Not tested
<i>Acacia diphylla</i>	10	5	0	Not tested

Appendix 7.1

Appendix 7.1. Guy Fawkes River National Park Fire Management Guidelines developed in 1996 from expert knowledge from Reid et al. (1996). (Referred to as the ‘original’ guidelines).	
Grassy woodlands and open forests on slopes and ridges	<p>Areas lacking a shrub understorey require fire exclusion for 5-15 years with monitoring to assess response.</p> <p>Grassy woodlands:</p> <ul style="list-style-type: none"> no more than two fires at intervals of less than 6-8 years should be permitted (to conserve fire-sensitive shrubs), the fire interval should not exceed 30 years (to conserve herbs and shrubs with short-lived individuals and seed banks), no more than two consecutive low intensity fires should be permitted (to conserve species with heat-stimulated seed banks),
Tablelands Open Forest	<ul style="list-style-type: none"> areas with a woody understorey are burnt by no more than two consecutive fires at intervals of less than 10 years (to conserve slow growing, woody understorey dominants such as <i>Allocasuarina</i> spp), areas without understorey are burnt by fire of at least moderate intensity within 25 years of the last fire (to conserve <i>Acacia filicifolia</i> and other hard-seeded species), areas are not burnt by three or more consecutive low intensity fires (to conserve hard-seeded species), intervals between fires in areas with a wattle understorey do not exceed 30 years (to conserve herbs and shrubs with short-lived individuals and seed banks), areas are not burnt by three or more consecutive fires at intervals of 15-30 years (to conserve sub-dominant herbs and shrubs).
Dry open forest with heath understorey on Chaelundi Plutonics	<ul style="list-style-type: none"> areas with a woody understorey are burnt by no more than two consecutive fires at intervals of less than 10 years (to conserve slow growing, fire sensitive shrubs), areas are burnt by no more than two consecutive fires at 15-30 year intervals (to conserve sub-dominant herbs and shrubs), areas are burnt by no more than two consecutive low intensity fires (to conserve hard-seeded species), the interval between fires does not exceed 30 years (to conserve herbs and shrubs with short-lived individuals and seed banks).
Grassy riverine flats	Fire exclusion for 5-15 years with monitoring and assessment.
Dry Rainforest	Fire should be excluded from dry rainforest and dry rainforest margins.
Subtropical Rainforest	Fire should be excluded from the riparian subtropical rainforest on the Boyd River.
Moist hardwood forest with subtropical-warm rainforest understorey	Fire should be excluded from the moist hardwood forest with subtropical-warm rainforest understorey to preserve the rainforest vegetation.
River Oak Gallery Forest	Fire should be excluded from the riparian zone, specifically the gallery forests of River Oak.

Appendix 7.2

Appendix 7.2 Fire management guidelines for the vegetation communities identified in the GFRNP vegetation map.

Vegetation community name (and number)	Recommended guideline
DRF (1)	Fire exclusion
STRF (2)	Fire exclusion
WTRF (3)	Fire exclusion
Tall WSF (4)	Fire exclusion in near future
Tall WSF (5)	Fire exclusion in near future
Tall WSF (6)	Fire exclusion in near future
Tall WSF/DSF (21)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 10 years (to conserve the slowest maturing species) • fire intervals should not exceed 30 years (to conserve short-lived species and seed banks), • no more than two consecutive low intensity fires (to conserve hard-seeded species).
Tall DSF (7)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 10 years (to conserve the slowest maturing species) • fire intervals should not exceed 20 years (to conserve short-lived species and seed banks), • no more than two consecutive low intensity fires (to conserve hard-seeded species).
Tall DSF (8)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 10 years (to conserve the slowest maturing species) • fire intervals should not exceed 20 years (to conserve short-lived species and seed banks).
Tall DSF (9)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 4 years (to conserve the slowest maturing species) • fire intervals should not exceed 30 years (to conserve short-lived species and seed banks), • no more than two consecutive low intensity fires (to conserve hard-seeded species).
Tall DSF(22)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 4 years (to conserve the slowest maturing species) • fire intervals should not exceed 80 years (to conserve short-lived species and seed banks).
Medium/Tall DSF (18)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 10 years (to conserve the slowest maturing species) • fire intervals should not exceed 80 years (to conserve short-lived species and seed banks).
Medium DSF (10)	A decline in biodiversity is possible if: <ul style="list-style-type: none"> • there are more than two fires at intervals less than 10 years (to conserve the slowest maturing species) • fire intervals should not exceed 30 years (to conserve short-lived species and seed banks).
Medium DSF (11)	A decline in biodiversity is possible if:

	<ul style="list-style-type: none"> • there are more than two fires at intervals less than 10 years (to conserve the slowest maturing species) • fire intervals should not exceed 30 years (to conserve short-lived species and seed banks), • no more than two consecutive low intensity fires (to conserve hard-seeded species).
