Informal Workplace Learning in Critical Care Nursing

Sally Dew

MNgSt (Deakin University), BAgSc (University of Adelaide), BA (University of Adelaide), Intensive Care Cert (TQEH), RGN (RAH)

February 2007

A thesis submitted for the degree of Doctor of Philosophy University of New England

Certification

I certify that I am the sole author and that the substance of this thesis has not already been submitted for any degree and is not being currently submitted for any other degrees.

I certify that to the best of my knowledge that any help in preparing this thesis, and all sources used, have been acknowledged in this thesis.

Sally Dew

Acknowledgments

Firstly I must acknowledge the contribution of the Nurses whose commitment to the research and willingness to report on and explore their experiences of learning in the workplace made this research possible. Their trust and enthusiasm in presenting their stories openly and frankly contributes to understandings of critical care nursing and workplace learning.

I would like to thank my supervisors Professor Margaret Somerville and Dr Darryl Dymock who enabled me to pursue the research in a way that gave the nurses the opportunity to determine how they would participate. Their knowledge, wisdom, friendship and time, both during doctoral weeks and through telephone conferences over the years helped me to gain further insight and build on the study. I also thank Dr Helen Edwards, whose untiring support, inquiring mind, warmth and friendship, both as a peer and in the last phase as my supervisor, have been invaluable.

I am indebted to Irena Niedzwiecki and Elaine Treadgold who were generous with their time in the early stages, providing support and guidance on database searches and computing skills. I must also thank Sylvia Ransom for sharing her knowledge in sourcing health and workplace learning updates, and her EndNote sessions. I thank Jim Selwood for practical support in transcribing the audiotapes, and Jackie Connell and Andrew De-Boeck for technical support. I also thank Margaret Bowden for her excellent editing and formatting, and in particular her determination and humour.

Critical friends Trish and Debbie, and train friends Margaret and Mandy provided fruitful discussions at crucial moments. I am grateful to dear friends Merri, Susanne, Helen, Veronica, Jill, Susan, Elaine and Morgan for their advice, help, warmth and laughter. The strongest link with the PhD experience was during the Doctoral Schools when Jill, Fran, Phil, Chrissiejoy, Marie, Tom, Laura, Phoenix, Martin, Annie, Adele, Alison, Paul, Helen and I gathered to share insights and were refuelled to move forward. I also wish to acknowledge the academic and general staff at the School of Professional Development and Leadership at UNE, who were always welcoming and supportive, especially during Doctoral School Week.

Finally, my family has encouraged and supported me throughout this journey. My parents Joan and Don, my sister and brother-in-law Cathy and Geoff, and my niece and nephew Rebecca and Jason have provided assistance, time, love and unending faith in my ability to achieve the goal.

Abstract

Rapidly changing developments in treatments and procedures in health care and advances in technologies increased the complexity of managing patients in intensive care units. This environment created challenges for the Nurses to acquire knowledge and skills continuously. The demand for this awareness was often urgent, with minimal time for familiarisation of new procedures or equipment.

This research explores how Critical Care Nurses' understanding of their informal workplace learning can enhance their professional practice. The study was undertaken in an intensive care unit of a large metropolitan hospital. A participatory action research approach with focus groups was used.

The use of focus groups in participatory action research enabled the nurses to discuss and decide the ways in which they would explore their own informal learning. It also provided opportunities for them to reflect on the many ways they gained knowledge and the strategies they used to learn informally.

Data were collected through the Critical Care Nurses' written narratives of learning experiences, as well as audio-taped focus groups and open-ended interviews. Thematic analysis was used to identify and group phrases into categories. These categories represented the Nurses' effective learning as well as challenges to learning.

During the participatory action research cycles the difficulties that Nurses faced in undertaking practice research became apparent and reflected the challenges of continuously building new knowledge.
