October

When the last weather changes. The earth tree flowers are yellow. White flowers on the paperbark tell us it’s time for sharks to be fat. We give them salt. We may call them salt water crocodile. Also give them the cold weather information. Leichhardt’s grasshopper comes out with first storms.

Mrs C W Daniels

‘When the green shoots come up, that’s when we manage and undertake boat patrols on the river. During August/September, rangers work on weed hunting. During September, women go into ground during burning and hibernate in the wet season. Many plant seeds need fire to get the right. Not only will the trees get growing, but the grass will grow. We can see the grass growing.
