ACKNOWLEDGEMENTS

With immense thanks to my supervisors Cliff Goddard, Karen Woodman and Liz Ellis. You have my sincere appreciation and thanks for your inspired ideas, advice, suggestions and meticulous attention to detail, both across the miles and onsite. Thank you for your professional and personal support. Few have supervisors who will literally travel to the other side of the world for them! With further thanks to the members of the Linguistics department at the University of New England for expertise and fond memories.

My deep gratitude and respect goes to Chuck Fillmore, Collin Baker, Miriam Petruck, Michael Ellsworth and the rest of the FrameNet team, for your kindness in allowing me to attend and participate in your weekly meetings. Special thanks to Eve Sweetser for sponsoring my visit to Cal. Thanks to the Linguistics department faculty and administrative staff at UC Berkeley for welcoming me into your extended family. Particular thanks to Debbie Anderson for her ready support and for providing me with opportunity.

Thanks to Dennis Alexander for his empathy, friendship and advice, and to Kalvin Stollznow for being on ‘standby’. With great thanks to Todd for his interest, enthusiasm and assistance. Thanks and admiration to Mitch Epling for his omnipresence and resourcefulness. Further thanks and credit to Ted Gwin, for his attentiveness and example gathering.

Profound, effusive thanks to Nik Kovacevic, who is deserving of an honorary degree in linguistics.
This thesis is an inquiry into discrimination, from a semantic perspective. In the discourse of discrimination, there is a set of key words. These terms are identified as the processes of discrimination, the progressive stages and manifestations of socio-cultural conflict. There are several dimensions to discrimination: a rhetorical dimension, consisting of the speech acts of discrimination; a social dimension, including the behaviours associated with discrimination; and a cognitive dimension, which includes the underlying attitudes and ideologies.

This thesis presents and justifies semantic explications for a field of words pertaining to the language of abuse, hatred and the processes of discrimination. The discussion is categorised into four sections, commencing with an examination of the speech act verbs: insult, abuse, denigrate, vilify and offend. Then follows an analysis of words that describe the social acts of discrimination, including dehumanise, demonise, marginalise, stigmatise and discriminate. Next is an analysis of words that describe the cognitive elements of discrimination, including stereotype, intolerance, prejudice, xenophobia, racism and sexism. The analysis considers aspects of semantic phenomena, including: synonymy, polysemy, metaphor and ambiguity. The final section is a treatise on overt and covert discrimination, and discusses perspectives and directions in this area of research.

The method of semantic representation adopted in this thesis is the Natural Semantic Metalanguage (NSM) approach advocated by Anna Wierzbicka and colleagues. This method employs reductive paraphrase to explicate lexical semantic structure. The data is sourced from naturally occurring examples and corpora, including Collins Word Bank and the British National Corpus. Where applicable, this work engages in a comparative discussion of lexicographical and lexicological methodology. The explications I have constructed are supported by pragmatic and syntactic evidence, extracted from speech media, corpora and other textual sources. The findings of this research have practical applications for many diverse fields, including law, public policy, education and conflict resolution, this work also endeavours to enhance the contribution of lexical semantics to lexicography.
